Tremendous acceleration and changes in scientific discovery and progress are presently occurring. These important emerging technologies that will affect the practicing surgeon within the next 10 to 20 years are illustrated in detail in this volume. Its purpose is not to review clinical experience of the common surgical practice of the past decade, but to outline and illustrate the future trends. International experts in this field demonstrate emerging procedures and significant advances.

Technologies that enhance the surgeon's ability beyond human limitations have provided newfound capacity to perform procedures that were previously considered impossible. Surgery will no longer be limited to what can be seen with the naked eye or felt by the human hand; 3D imaging and telepresence surgery extend the reach beyond these limits. The challenge to the surgeon is to be aware of the opportunities, rigorously evaluate the technologies, and be willing to change if evidence-based ...

One side of surgery that most people never get to see is the planning phase, in which surgeons and support staff determine the best methods and approaches for operations on particular patients. This process can be long and labor-intensive, but the use of virtual reality for visualization has improved considerably in the past couple of years. Surgeons can now use VR technology, coupled with patient imaging scans, to plan the exact route of the surgical process. This kind of planning is faster ...
