**Unit 12 - Mendelian Genetics**  
**Review Packet - Practice Problems**

**One Factor Problems:**

1. The ability to taste the chemical PTC is determined by a single gene in humans. The ability to taste the gene is dominant and the inability to taste the chemical is recessive. Suppose two hybrid tasters have a large family.

- a. Predict the proportion of their children who will be tasters and non-tasters. Use the Punnett square below to make your prediction.

	T	t	
T	TT	Tt	75% Tasters 25% Non- tasters
t	Tt	tt	

- b. What is the likelihood that their first child will be a taster?  
**3/4 or 75%**
- c. What is the likelihood that their fourth child will be a taster?  
**3/4 or 75%**
2. In a certain plant species, blue flower color is dominant to white. You have a blue flowered plant and a white flowered plant.
- a. What do you know about the genotype of each plant in the P Generation?  
**Blue = BB or Bb      White = bb**
- b. Now you cross these plants and ALL the F1 offspring are blue. What have you learned about the genotypes of the parents?  
**Must be BB**
- c. Cross two plants from the F1 generation. Use the Punnett Square below and predict what percentage of the offspring will be white and what percentage will be blue.

	B	b	
B	BB	Bb	75% Blue
b	Bb	bb

Genetics Case Study Part II: Genetics Describe if chromosomal analysis is/was indicated. Huntington disease, also known as HD [MIM 143100] is dominantly inherited gradually neurodegenerative disorder. It is caused by a mutation; which leads to the expansion of the CAG or polymorphic trinucleotide HTT tract. Normatively, the size of the control CAG among ordinary people should be between 17 and ...

### Genetics Case Study Worksheets | BetterLesson

Case Study: Cancer in the Family. People tend to look similar to their biological parents, as illustrated by the family tree in Figure  $\{1\}$ . But, you can also inherit traits from your parents that you can't see. Yaffah becomes very aware of this fact when she visits her new doctor for a physical exam. Her doctor asks several questions about her family's medical history ...

### 8.1: Case Study: Genes and Inheritance - Biology LibreTexts

Hello, and welcome back to Introduction to Genetics and Evolution. In the previous videos, we talked about the general principles of natural selection as applied to single loci or as applied to phenotypes. What I wanted to do in this video is to present to you some elegant case studies and examples of natural selection. Cases where looking at

animals or plants in the field, we tend to see ...

Case Study: Recombinant DNA Technology and Biosafety. Dr. Fouchier, a scientist at the Erasmus Medical Center in the Netherlands, used recombinant DNA technology to artificially introduce mutations in the H5N1 bird flu that made the disease easily transmissible from human to human. At present, the bird flu can only infect humans via

direct contact with an animal host. However, there is a ...

### Educational Information - Genetics | GWUMC

Usually a case study opens up with a cover page, but it depends on the prof's instructions and is optional. The first must-have section, an executive summary, is a brief outline of main findings, points of analysis, and most important, solutions. This part of the case report is assumed to be digested by executives/seniors literally on the run in real life, so it should contain all crucial ...

### Case Study: Basic Guide for Students (with Examples)

The case-only study design used to study gene-environment interaction has been criticized for its susceptibility to bias caused by nonindependence between genetic and environmental factors [39-41]. Each person with disease (D) that is coded as positive or negative for a genetic factor (G) and environmental factor (E) can be located in one of the four situations of (D++), (D--), (D ...

### Study Designs in Genetic Epidemiology

SB13U Name: \_\_\_\_\_ Fiona Lumi \_\_\_\_\_ Genetics #2- Case study Part I - "The Genetic Test" 1. Discuss why Nancy might or might not want to know the results of her blood test for CF. The reason Nancy may not want to know the result of her blood test for CF is because she could potentially find out that she is a carrier of CF. This being, Nancy could pass it on to her child, or her child could ...
