Topic Detection and Tracking (TDT) is an information processing technique for the information flow on news media [1], which can detect the appearance of new topics and track their reappearance and...

Topic Detection and Tracking: Event-Based Information ...

Topic Detection and Tracking: Event-based Information Organization brings together in one place state-of-the-art research in Topic Detection and Tracking (TDT). This collection of technical papers...

Topic Detection and Tracking: Event-based Information ...

Topic Detection and Tracking (TDT) is a new research area that investigates the organization of information by event rather than by subject. In this paper, we provide an overview of the TDT research program from its inception to the third phase that is now underway. We also discuss our approach to two of the TDT problems in detail.

Topic Detection and Tracking: Event Clustering as a Basis ...

With the definition of topic, the Topic Detection and Tracking can be known as to investigate the state of the art in finding and following new events in a stream of broadcast news stories. According to the Pilot-study, the original TDT problem consists of three major tasks: (i) segmenting a stream of data, especially recognized speech, into distinct stories; (ii) identifying those news stories that are the first to discuss a new event occurring in the news; and (iii) given a small number of ...

Topic detection and tracking | Guide books

Abstract The objective of the Topic Detection and Tracking (TDT) program is to develop technologies that search, organize and structure multilingual, news oriented textual materials from a variety of broadcast news media. This research program uses controlled laboratory simulations of hypothetical systems to test the efficacy

Topic Detection and Tracking Evaluation Overview

Existing work that is relevant to our topic mining method falls into three categories: topic detection and tracking, evolutionary clustering, and dynamic topic models. Topic detection and tracking ==[1, 33]== aims to automatically detect new topics and find new stories on already known topics in temporally ordered news streams.

Topic Detection and Tracking: Event-Based Information ...

Segmentation, New Event Detection, Topic Detection, Topic Tracking and Link Detection. In our research we have concentrated on the Topic Detection task, ie the grouping together of stories that discuss the same event into topical clusters. This can be performed on either a retrospective corpus of documents or on a live stream. A complete Topic Detection system would allow the user to gather ...

A Topic Detection System for Online News

Topic Detection and Tracking (TDT) is a DARPA-sponsored initiative to investigate the state of the art in finding and following new events in a stream of broadcast news stories. The TDT problem consists of three major tasks: (1) segmenting a stream of data, especially recognized speech, into distinct stories; (2) identifying those news stories that are the first to discuss a new event occurring in the news; and (3) given a small number of sample news stories about an event, finding all ...

Topic Detection and Tracking Pilot Study Final Report

The purpose of this book is to provide a record of the state of the art in Topic Detection and Tracking (TDT) in a single place. Research in TDT has been going on for about five years, and publications related to it are scattered all over the place as technical reports, unpublished manuscripts, or in numerous conference proceedings. The third and fourth in a series of on-going TDT evaluations marked ...

Topic Detection and Tracking: Event-based Information ...

Topic Detection and Tracking (TDT) is a DARPA-sponsored initiative to investigate the state of the art in finding and following new events in a stream of broadcast news stories.

Topic Detection and Tracking Pilot Study Final Report

Topic Detection: Topic detection can be accomplished using any clustering algorithm that satisfies the two restrictions: * Clustering has to be done on the fly: we have to

decide on a cluster for story Dk before we are allowed to examine the next story Dk+1. * Resulting clusters must be non overlapping i.e. every story must belong to one and only one cluster.
